Network Layer is in C	DSI's:
A. 1st layer	
O B. 4th layer	
C. 7th layer	
D. 3rd layer	✓
Paul annua y	
Ваш ответ верный.	
Правильный ответ:	
3rd layer

баллов: 0, Which	of the following is the function of layer 2 switch?
баллов: 0, Which	
Баллов: 0, Which	of the following is the function of layer 2 switch? Forward packets based upon a routing table, provide traffic segmentation, multiple broadcast domains,
Which A.	of the following is the function of layer 2 switch? Forward packets based upon a routing table, provide traffic segmentation, multiple broadcast domains, and define network layer addressing subnets and networks. Interconnect networks at data link layer, most commonly at the MAC sublayer, and operate as bridges,
Which A. B.	of the following is the function of layer 2 switch? Forward packets based upon a routing table, provide traffic segmentation, multiple broadcast domains, and define network layer addressing subnets and networks. Interconnect networks at data link layer, most commonly at the MAC sublayer, and operate as bridges, building tables for the transfer of frames among networks.
Which A. B. C.	of the following is the function of layer 2 switch? Forward packets based upon a routing table, provide traffic segmentation, multiple broadcast domains, and define network layer addressing subnets and networks. Interconnect networks at data link layer, most commonly at the MAC sublayer, and operate as bridges, building tables for the transfer of frames among networks. Connect multiple Ethernet devices together and make them act as a single network segment.
Which A. B. C. D.	of the following is the function of layer 2 switch? Forward packets based upon a routing table, provide traffic segmentation, multiple broadcast domains, and define network layer addressing subnets and networks. Interconnect networks at data link layer, most commonly at the MAC sublayer, and operate as bridges, building tables for the transfer of frames among networks. Connect multiple Ethernet devices together and make them act as a single network segment. Monitor incoming and outgoing network traffic and decide whether to allow or block specific traffic based on a defined set of security rules.

	of the following is the function of router?
	Connect multiple Ethernet devices together and make them act as a single network segment.
○ B.	Interconnect networks at data link layer, most commonly at the MAC sublayer, and operate as bridges, building tables for the transfer of frames among networks.
C.	Forward packets based upon a routing table, provide traffic segmentation, multiple broadcast domains, \checkmark and define network layer addressing subnets and networks.
O D.	Monitor incoming and outgoing network traffic and decide whether to allow or block specific traffic based on a defined set of security rules.
Ваш от	вет верный.
Прави	льный ответ:
	d packets based upon a routing table, provide traffic segmentation, multiple broadcast domains, and define k layer addressing subnets and networks.
